

MAGNESIUM ALLOY WHEEL FOR NON-COMPETITIVE TRACK USE

Clean the wheels regularly with warm water and mild soap, dry them well after washing, check them carefully and report any signs of corrosion, cracks or other anomalies to your official OZ dealer or OZ Customer Service.

Protect the wheels from salt and humidity avoiding winter use or in coastal areas of the sea.

When not in use clean thoroughly and store in a dry place and at least once a year remove the tyre and check the wheel.

When you store the wheels avoid contact with other metals, especially in the presence of water or moisture.

In case of paint removal due to impacts (e.g. curbstone) the paint must be restored.
